

# We Are Printing **GREEN!**

**And Every Color of the Rainbow!**

*At Packaging Innovators Corporation,  
we believe that there is nothing more  
important than our planet.*

*In doing our part, we use  to print  
your packaging and display products.*

HydroSoy flexographic water-based corrugated inks 

- Can be used in conjunction with the Soyseal mark from the American Soybean Association
- Meets or exceeds the standards for water-based flexographic soy ink as established by the American Soybean Association
- Reduces America's dependence on foreign petroleum and makes use of an American agricultural product
- Unlike conventional inks that utilize synthetic polymers exclusively, contains a binder component that is readily degradable and bio-degradable
- Very low volatile organic compound (VOC) content
- No flammable solvent content
- Water is the major component
- Recyclable and repulpable
- Wash-up with soap and water
- No generation of hazardous waste from waste ink and cleaning operations
- Meets CONEG requirements for heavy-metal content
- Formulated without toxic heavy metals such as chromium, lead, mercury, cadmium, and arsenic
- Non-corrosive
- Non-reactive
- Solidified waste can usually be landfilled as non-hazardous waste
- Press return is easily recycled
